

## **Orange Renewable adds 100 MW Capacity to Its Wind Portfolio**

### **Commissions projects in Gujarat and Karnataka**

**New Delhi, 24th April, 2017:** Orange Renewable, a 100% subsidiary of AT Holdings Pte Ltd, Singapore has recently partnered with Gamesa India to add a capacity of 100 MW to its existing operational wind portfolio with the commissioning of 40 MW in the district of Rajkot, Gujarat and 60 MW in Yadgir, Karnataka. Gamesa India has supplied 50 turbines (G114 and G97) of 2000 KW to these projects.

Orange Renewable has added wind capacity of 210 MW to its fleet during the financial year 2016-17 MW to reach a mark of 567 MW of operational wind power delivered by 304 turbines, with a pipeline of over 2 GW wind capacity under development across major windy states in India.

Speaking on the development **Mr. Hemant Tikoo, Executive Committee Member, Orange**

**Renewable** said, "We are delighted to be part of steadfastly growing renewable energy sector in India. The progressive trajectory of our wind and solar verticals testify our commitment towards developing clean energy solutions for a better tomorrow. We stand committed to our long term goals in India and will continue to look for opportunities for further investments."

Speaking further, **Mr. Sudhir Nunes, CEO Wind Business, Orange Renewable** said, "We are extremely delighted with our growing portfolio of clean energy assets. The commissioning of

our wind projects are aligned to our growth strategies for the region and a steady step towards building clean energy resources. Orange Renewable is poised to play a pivotal role in the production, transmission and distribution of renewable energy in the years to come.”

Orange has entered into agreements with Gujarat Urja Vikas Nigam Ltd. and Gulbarga Electricity Supply Company Limited for supply of clean energy on long term basis at affordable tariff. The projects are expected to generate electricity to power 67,100 households.

These two projects will mitigate carbon footprint by approx. 2.82 lac t CO<sub>2e</sub>/ annually.
